Portfolio

PROFILE

DevOps and DevSecOps engineer focused on building reliable CI/CD pipelines, securing Kubernetes clusters, and automating infrastructure at scale. I work across AWS, Linux systems, and containerized environments, with deep experience in GitLab CI/CD, Terraform, Ansible, and monitoring stacks.

TECHNICAL SKILLS

Cloud
AWS (EC2, EKS, ECR, IAM, S3, VPC, Lambda)

Containers & Orchestration
Docker, Kubernetes, Helm, Kustomize, Istio, OPA, Kyverno

CI/CD & GitOps
GitLab CI/CD, Jenkins, ArgoCD, Flux CD, GitLab Runners

Infrastructure as Code
Terraform, Ansible

Security
Trivy, GitLeaks, Semgrep, OWASP ZAP, SonarQube, Checkov, KubeLinter, Falco, HashiCorp Vault, AWS Secrets Manager

Monitoring & Logging
Prometheus, Grafana, Loki, Alertmanager

Networking · Scripting · DB · Storage
Nginx Ingress, Traefik, Cert-Manager, External-DNS, Bash, Python, PostgreSQL, MongoDB, Redis, NFS, Harbor, Nexus

Virtualization · AI Tooling
KVM, VirtualBox, Vagrant, MCP, OpenCode, AI-assisted infra

LANGUAGES

Arabic	Native
French	Professional
English	Professional

KEY ACHIEVEMENTS

- Zero-trust security architecture on Kubernetes
- Automated security scanning in CI/CD pipelines
- GitOps with ArgoCD & Flux CD
- High availability with PDB & autoscaling
- Comprehensive monitoring & alerting stack

EDUCATION

Bachelor's Degree
Information Technology (Computer Networks and Services)
I.S.E.T. · 2011 – 2014

High School Baccalaureate
Computer Science
2010 – 2011

DevOps & DevSecOps Engineer · TUNISIE SOFTWARE FACTORY & BE-SOFTILYS

Jun 2025 – Oct 2024

- Built GitLab CI/CD pipelines with Trivy, GitLeaks, and Semgrep scanning. Vulnerable images blocked before staging
- Deployed zero-trust security across Kubernetes clusters with Istio mTLS, NetworkPolicies, and OPA Gatekeeper
- Wired HashiCorp Vault into deployment workflows with automated secret rotation via External Secrets Operator
- Setup Prometheus & Grafana dashboards with Alertmanager routing; MTTR dropped noticeably
- Configured HPA and PodDisruptionBudgets to handle traffic spikes without dropping requests
- Automated TLS certificate provisioning with Cert-Manager for all ingress resources
- Ran end-to-end infrastructure validation tests after each provisioning cycle; caught drift before production
- Enforced CI/CD security gates with vulnerability thresholds; pipelines failed when thresholds breached
- Centralized vulnerability tracking in DefectDojo for remediation progress
- Debugged Kubernetes runtime issues — CrashLoopBackOff, ImagePullBackOff, scheduling failures
- Wrote runbooks and deployment docs; validation reports kept a paper trail
- Pre-sales discussions with prospective clients on architecture options
- Configured MCP servers for AI assistants to query Kubernetes, CI/CD, and monitoring data
- Brought AI assistants into daily workflows for log analysis, incident triage, diagnostics
- Used AI tools to speed Terraform & Ansible development; fewer configuration errors
- Branch protection rules with required reviews and automated pipeline checks
- Connected Alertmanager to Jira; alerts auto-generate service tickets
- Supply chain security: SBOM generation, Cosign image signing, dependency tracking
- Deployed Falco for runtime security on Kubernetes workloads

Kubernetes, Docker, Helm, ArgoCD, GitLab CI/CD, Terraform, AWS, GitLeaks, Semgrep, Trivy, OPA Gatekeeper, Kyverno, DefectDojo, Prometheus, Grafana, Istio, HashiCorp Vault, Harbor

DevOps Engineer · DOPIFY SOFTWARE & TECHNOLOGIES

Apr 2024 – Jan 2024

- Designed CI/CD pipelines for multiple teams with SAST, SCA, and secrets scanning in every build
- Automated server provisioning across dev, staging, production with Ansible; eliminated manual drift
- Set up Flux CD for GitOps-driven infrastructure; declarative, auditable environments
- Deployed Grafana Loki for centralized log aggregation; faster root cause analysis
- Zero-downtime deployments with blue-green and canary strategies using Kustomize overlays
- Configured Nginx Ingress Controller with TLS termination for external routing
- Provisioned self-hosted GitLab runners with Docker executor; CI queue times dropped
- Alertmanager routed incidents to Slack and email; right people paged at the right time
- Automated test scripts to validate infrastructure state after provisioning
- Managed pipeline governance and cutover planning for production releases
- Tracked down performance degradation via system and application logs
- Documented infrastructure architecture, deployment procedures, known issues
- Git branch protection with required reviews and status checks; quality gates before merge

AWS, Kubernetes, Docker, Terraform, Ansible, Flux CD, Grafana, Prometheus, GitLab CI/CD, HashiCorp Vault, Trivy, SonarQube, Kustomize, Nginx, Alertmanager

DevOps Engineer · GEO-TRACKING GROUP — Oct 2023 – Apr 2022

- Rebuilt CI/CD pipelines; deployment time from days to hours across 15+ microservices
- Cut Docker image sizes by 60% with multi-stage builds; pull times and storage costs dropped
- Provisioned AWS infrastructure with Terraform modules; version-controlled, reproducible
- Integrated SonarQube for automated code quality checks and technical debt tracking
- Wrote Prometheus alerting rules for proactive detection; unplanned outages dropped 40%
- Automated dependency updates and security patching via GitOps across 200+ dependencies
- Managed Docker images and Kubernetes manifests in Nexus as single source of truth
- Automated database backup jobs with point-in-time recovery for PostgreSQL and MySQL
- Hardened pod security with SecurityContext and network segmentation via IPTables/UFW
- Built reusable Jenkins shared libraries to standardize pipeline templates
- Ran installation and upgrade testing; documented results and flagged deviations
- Monitored storage capacity and performance metrics; tuned configs for availability
- Responded to incidents and wrote post-incident reports with remediation steps
- Integrated LDAP for centralized authentication

Jenkins · Docker · Kubernetes · Terraform · Ansible · ArgoCD · SonarQube · Nexus · Prometheus · Grafana · Python · Bash · AWS · PostgreSQL · Cert Manager

System Administrator · VARIOUS ORGANIZATIONS — Jan 2022 – Feb 2016

- Managed Linux servers (RHEL, Ubuntu, Debian) — patching, security updates, tuning
- Automated VM provisioning with Ansible; new environment setup time dropped
- Administered routers, switches, firewalls; maintained network policies
- Set up NFS file sharing for centralized storage access across teams
- Configured DNS, DHCP, internal network services
- Designed and tested disaster recovery procedures with regular backup validation
- Managed MySQL and PostgreSQL — backup, recovery, performance optimization
- Configured IPTables and UFW firewall rules to segment network and restrict access
- Deployed Apache and Nginx web servers for internal/external applications
- Integrated Active Directory for centralized authentication across Linux/Windows
- Managed user accounts, SSH keys, sudo policies across enterprise environments
- Provided L2/L3 support with root cause analysis
- Helped end-users with hardware, software, network problems; training sessions
- Maintained documentation of IT processes, network configs, troubleshooting
- Configured storage systems over IPv4 with proper addressing and routing
- Worked with technical teams to plan infrastructure improvements and automation
- Automated alert-to-ticket workflows with SLA-managed resolution
